1 Introduction

1.1 About the operating manual

The operating manual contains important information for those concerned with the set up and use of the appliance and is designed to ensure safe and proper working with the equipment.

Prerequisite for this is the knowledge of the safety aspects to be observed for installation and use as well as the maintenance of machine. Therefore start reading the operating manual at the chapter "Safety". The subsequent chapters are further main points of information for the personnel.

To avoid improper use, this operating manual should be kept near the machine and must be available at all times for those concerned with the machine. The accident prevention and the general safety regulations must be observed at all times when using the appliance.

NOTE!

The drawings shown in this manual may differ slightly from the actual design of the machine.

1.2 Manufacturer

Address:

G. Staehle GmbH u. Co. KG
Mercedesstraße 15
D-70 372 Stuttgart

Contact:

Phone: +49 (0)711 / 95 44-950
Fax: +49 (0)711 / 95 44 -941
e-mail: info@columbus-clean.com
Internet: www.columbus-clean.com

1.3 Liability and warranty

All details and information concerning operation, maintenance and cleaning of the equipment is true according to our existing experience and to the best of our knowledge.

We reserve the right to make technical improvements within the scope of the development of the appliance described in this operating manual.

Translations are correct to the best of our knowledge. However, we cannot accept liability for any translation errors. Legally authoritative is the German version of the operating manual supplied herewith.

The text and illustrations may not be identical to the goods supplied. The drawings and charts are not to scale 1:1.

Please read this operating manual carefully before operating the equipment!

The manufacturer does not accept any liability for damage or failure due to non-observance of this operating manual.

It is not permitted to communicate the information in this operating manual to a third party. Any such action will lead to claims for compensation.

1.4 Explanation of symbols

Important hints, such as safety instructions, are indicated with appropriate symbols. These instructions must be followed exactly to avoid accidents or damage to the appliance.

WARNING!

This symbol is used to indicate all safety instructions in this operating manual whose non-observance could result in injury or death. Please follow these safety instructions exactly and take particular care in these cases.

**WARNING! Danger of electric shock!**

This symbol draws attention to the risk of an electric shock. By non-observance of these safety instructions there is a danger of injury or death. Such work may only be carried out by a properly trained electrician.

**ATTENTION!**

The attention symbol marks all safety instructions in this operating manual, which must be kept because non-observance could lead to damage and/or malfunction of the appliance.

**NOTE!**

This symbol draws attention to hints and other useful information contained in the operating manual. All hints should be heeded to ensure the effective use of the appliance.

1.5 Spare parts

Use only original spare parts and accessories from the manufacturer.

**ATTENTION!**

The use of wrong or faulty spare parts from other manufacturers may result in damage to the appliance.

Despite this, should spare parts other than original parts from the manufacturer be used, or parts obtained from elsewhere, all obligations entered into by the manufacturer or his representations, such as warranties, maintenance contracts, etc., will immediately become null and void.

1.6 Copyright

This operating manual is to be treated confidentially. It may only be used by the persons for whom it is intended. Communication to a third party is only permitted with the written consent of the manufacturer.

All documents are protected by copyright law.

Passing on or duplication of documents, in whole or in part, or utilization or communication of the content is not permitted, unless expressly agreed. Offences are punishable and will lead to claims for compensation.

We reserve all rights to enforce our legal protection rights.

1.7 Disposal

- Consumable materials, conservation and cleaning products must be disposed of according to current environmental protection regulations.
- Any liquid which leaks out must be contained and disposed of in accordance with environmental regulations or better recycled where possible.
- Dispose of the machine by returning it to one of the subsidiaries of the manufacturer and not via public waste disposal.

2 Safety

This chapter contains an overview of all important safety aspects.

In addition, the individual sections contain specific safety instructions on how danger can be avoided, indicated by the appropriate symbols. Furthermore, the pictograms, signs and instructions on the appliance must be observed and kept in readable condition.

Observation of the safety instructions permits optimal protection of the personnel and third parties from hazards and ensures safe and reliable operation of the equipment.

2.1 Introduction

The appliance conforms to the current standard of technology and operational safety.

However, dangers can arise from this appliance if it is used by not properly trained personnel, used improperly or used for a purpose other than that intended.

Every person, who is asked to work with or carry out work on the appliance, is required to read the operating manual and have understood it before working with the equipment. This also applies to people who have already worked with such an appliance or a similar one or who were trained by the manufacturer.

Knowledge of the content of the operating manual is a prerequisite for protecting personnel for danger and avoiding mistakes and thus ensure safe and reliable operation of the appliance.

To avoid danger and ensure optimal performance, no modifications or changes may be made to the equipment, unless they have been expressly approved by the manufacturer.

All safety signs and operating instructions on the appliance must always be kept in a clearly readable condition. Damaged or unreadable signs must be replaced immediately.

The settings and ranges of values shown in the operating manual must be adhered to.

The employer is advised to obtain confirmation from the operator that he/she had read and understood the operating manual.

2.2 Responsibility of the owner / operator

The appliance may only be used when it is in a safe condition and in perfect working order. The owner/operator is responsible for ensuring reliable operation of the equipment. The instructions given in the operating manual are to be respected in full and without reservations!

The statements about the work safety refer to the directives of the European Union, valid at the time of manufacture of the appliance. During the entire working life of the equipment, the owner/operator is obliged to compare the above mentioned safety protection measures with those currently in force and heed any new rules which may have been introduced subsequently. Outside the European Union, the work safety laws and local regulations valid where the equipment is used must be respected.

2.3 Proper use

Operational safety of the appliance is only assured when the equipment is used according to the instructions contained in the operating manual.

The single brush machine is only designed for scrubbing, polishing, cleaning waterproof and abrasion resistant floor and shampooing textil coverings inside buildings.

The vac unit available as an accessory can be used to suck in dry polish dust and swarf.

The surfaces to be cleaned must be flat and not exceed an inclination of more than 10 percent. You must not go over uneven bumps, such as thresholds and steps, when cleaning. The machine may not be used in damp locations.

'Proper use' also means observing the correct procedures concerning set up, operation, maintenance and cleaning instructions.

Every use of the appliance which goes beyond this and/or other use is forbidden and will be regarded as improper use! Claims for damage, of whatever kind, resulting from improper use against the manufacturer and/or his representatives are excluded. The operator alone is liable for all damage which may arise from improper use.

2.4 Work safety

Danger to persons and/or the equipment can be avoided by following the work safety instructions.

Non-observance of these instructions can put people or objects at risk through mechanical or electrical factors or through the equipment breaking down.

Non-observance of the safety regulations will result in the loss of any right to claim for damage.

2.5 Protective clothing

When working on and with the appliance the following must be worn:

- Solid closed shoes with non-skid soles
- Close-fitting working clothes (resistant to tearing, no wide sleeves, no rings or other jewellery, etc.)

2.6 Dangers resulting from the equipment

The appliance has undergone a risk assessment. The design and layout of the equipment resulting from this corresponds to the current state-of-the-art.

However, a certain residual risk always remains!

The appliance needs to be used responsibly and carefully. Improper use or use by unauthorized persons can endanger other people.

WARNING! Risk of injury!

Improper use of the equipment can cause serious injuries through crushing, running over or contacting people with the rotating brushes, pad holder. Thus the following rules should be observe:

- The appliance may not be used on floors with an inclination of more than 10%.
- Move the appliance cautiously, taking care to avoid other people and objects in the vicinity.
- When working with the appliance never put other people at risk.
- When working, ensure that other people – especially children – never come into contact with the appliance.
- Unauthorized persons should not have access to the appliance.

ATTENTION!

Improper use can cause considerable damage to the appliance, floor covering as well as other objects. When using the appliance, never run over thresholds, steps, carpets or objects which could get caught, such as cables.

The friction of the brush on the floor aids the forward motion of the appliance. When the appliance is switched on, it may move forward by itself in any direction.

WARNING! Risk of injury!

The uncontrolled forward motion of the appliance can cause serious injuries through crushing, running over or falling over. Thus the following rules should be observed:

- Never let go of the handle when the machine is running.
- Before leaving go of the handle, always first switch off the machine.
- Never switch on the machine with the guide bar in a vertical position.
- Always guide the machine with both hands.

The appliance is equipped with a rotating brush or a pad holder.

WARNING! Risk of injury!

Rotating brushes or pad holders can cause serious injuries if they come into contact with anyone. Thus the following rules should be observed:

- Never touch rotating brushes or pad holders.
- Never touch other people with the rotating brushes or drive plates.
- Before you do touch brushes or pad holders, always switch off the appliance and wait until the parts have come to a complete stop.

WARNING! Danger of electric shock!

Electricity can cause serious injuries. If the insulation or individual components are damaged, there may be a risk of a fatal electric shock. Therefore:

- Before working on the appliance always unplug it!
- Make sure that the mains power cable is not damaged by squeezing, jerking, chafing, etc.
- Do not drive over the mains power cable.
- Always check the mains lead for damage before plugging in the appliance.
- Before replacing cables, plugs, couplings, fuses or sockets, check for conformity with the technical data specified by the manufacturer.

WARNING! Risk of injury by slipping!

When working with the appliance, always wear non-skid safety shoes and ensure that any cleaning fluid which has leaked out has been cleaned up completely.

When cleaning floors with the appliance, cleaning agents can be used.

WARNING!

Cleaning agents can be hazardous to health. Thus the following rules should be observed:

- Ensure that the cleaning agent does not come into contact with the skin or the eyes.
- Keep to the concentrations specified in the cleaning agent manufacturer's guidelines.
- Follow the instructions in the cleaning agent manufacturer's safety data sheet.

2.7 Operating personnel

The appliance may only be operated and maintained by approved, properly trained and instructed personnel. The personnel must have been specially instructed about the dangers which could arise.

"Instructed persons" are those who have been informed about the tasks they have to perform and about possible hazards if the equipment is used incorrectly; where necessary, they have been taught about the appropriate protection measures and the precautions to be taken.

"Qualified persons" are those who, through their training, knowledge and experience as well as their knowledge of the relevant regulations, are able to do the tasks conferred on them and to recognize the potential dangers.

If the persons concerned do not have the necessary knowledge, then training is required accordingly.

The responsibilities for operating and servicing the equipment must be clearly defined and adhered to, so that misunderstandings which could affect safety are avoided.

The appliance may only be operated and maintained by people who can be expected to perform their work reliably. Their approach to work must in no way endanger other people, the environment or the equipment.

People under the influence of drugs, alcohol or medication which affects their reactions, are not allowed to work on or with the appliance **in any way**.

When choosing personnel, the youth employment laws of the country concerned must be taken into account with regard to minimum age requirements and any occupation-specific rules relating to this.

It is the responsibility of the operator to ensure that no unauthorized person works on or with the appliance. Unauthorized persons, such as visitors, etc., may not handle the appliance. For security reasons they must be kept at an appropriate distance.

It is the duty of the operator to report any changes in the way the appliance works, which could affect safety, immediately to the person responsible..

2.8 Working position

When cleaning floors, the working position of the operator is behind the handle of the appliance. The appliance may only be operated by one person at a time.

2.9 Conduct in the case of danger or accidents

Where there is danger or if an accident occurs, immediately stop the appliance by switching it off at the control panel and secure it against rolling away (see Chapter "Operation").

Ensure that first-aid equipment (first-aid box, eye lotion, etc.) and a fire extinguisher are available nearby.

Staff must be made aware of the procedures to be followed and the location of safety equipment, alarm buttons, first-aid boxes and rescue equipment. This will ensure prompt action in the case of accidents or if dangers arise.

3 Design overview and features

5. push button
6. positioning lever

3.4 Appliance description / functions

The appliance is suitable for polishing and spray-cleaning waterproof and abrasion resistant floor and shampooing textile coverings inside buildings. With the optional vac unit it is also suitable for vacuuming of dry, non-noxious polishing dusts.

The operator has to push the appliance forward over the floor area to be cleaned by means of the handle.

4 Technical data

Model		HS 1001	HS 1601
Rated voltage	V / Hz	230/50	230/50
Rated power	W	1500	1500
Working width	cm	50	50
max. working height	cm	33	33
Brush speed	1/min	1000	1600
Surface pressure	N/cm ²	adjustable	adjustable
power supply cable	m	12	12
Dimensions			
L	cm	50	50
W	cm	77	77
H	cm	116	116
Noise level	dB(A)	66	68
Tests		CE	CE
Safety class		I	I
Weight	kg	42,5	42,5

We reserve the right to make technical changes to the product to improve product performance and for further development.

5 Transport, packaging and storage

5.1 Safety advice

WARNING! Risk of injury!

During transport or loading and unloading there is a risk of injury from falling parts. The appliance may be damaged or ruined if transported in the wrong way. For this reason the following safety advice should be observed:

- Never transport loads above peoples heads.
- Always take great care when moving the appliance.

5.2 Transport inspection

We recommend that you check the whole delivery for completeness and possible transport damage as soon as it arrives. Where damage is suspected, only conditionally accept the goods (e.g. on the delivery papers) giving details of any suspected damage. Inform the manufacturer immediately.

5.3 Packaging

The appliances are despatched in different packaging.

The most commonly used packaging materials are wood, cardboard and plastic (foil and expanded polystyrene), but other materials such as tightening straps are also used. Packaging materials may also include materials to protect the goods from moisture or frost (e.g. silica gel bags, antifreeze, etc.)

Unless specifically agreed that the packaging material should be returned, the packaging material remains with the customer.

ATTENTION!

Environmentally friendly disposal conform to the relevant environmental protection regulations must be assured. If necessary, a specialized recycling firm should be entrusted with the task of disposing of the packaging material.

5.4 Storage

After unloading, the packages must be stored in accordance with the relevant markings on the outside until assembly takes place.

Packed appliance components and attachments should not be unpacked.

The following regulations apply to storage:

- Store dry. Relative humidity: max. 60 %
- The packages must not be stored outside in the open air.
Furthermore it must be guaranteed that the warehouse floor stays dry during the storage period.
- Protect against direct sunlight. Storage temperature 15 to 25 °C
- Store in dust-free surroundings.
- Avoid mechanical vibration and damage.
- When storing for more than about 3 months, check that the protective measures taken are adequate.
In aggressive surroundings, the protective measures may need to be renewed.

6 Assembly

WARNING! Risk of injury!

The appliance may put people and objects at risk. Work on and with the appliance may only be carried out by properly qualified personnel in accordance with all the safety instructions mentioned in the chapter of "Safety"!

Before any assembly work is carried out, switch off the appliance completely and pull out the mains plug.

6.1 Before assembly

Fig. 4 Scope of delivery

Before assembly, check that all parts required for operation have been delivered.

Scope of delivery

- | | |
|----|----------------------------|
| 1. | Machine housing |
| 2. | Guide bar with power cable |
| 3. | Operating manual |
| 4. | Spare parts list |

6.2 Assembly of the guide bar

Fig. 5 Assembly of guide bar

1. Unscrew the four nuts (1) from the threaded bolts (2) on the guide bar and machine body. Use a ring or a flat spanner SW 13.
2. Position the holding fixture (3) of the guide bar onto the threaded bolts (2).
3. Fix holding mechanism screwing the nuts (1) back on the threaded bolts (2) and tighten them.
Make sure that the holder sits flat on the machine body and is tightly fixed.
4. Plug the mains plug (4) into the socket (5) provided.

NOTE!

To bring the guide bar into a different position after assembly, pull the positioning lever and swivel the guide bar into the required position. Then release the positioning lever again.

6.3 Assembly of accessories (Optional)

6.3.1 Assembling the spray device (Optional)

Fig. 5 Spray can

Fill the spray can

ATTENTION!

The wrong detergent can damage the appliance. The following should be observed:

- Only use detergents approved by the manufacturer.
- Never fill the spray can with liquid wax.
- Never fill in liquids that are warmer than 40°C!

1. Hold firm the spray can at the bottom.
2. Rotate the lid (1) counter-clockwise to screw it off.
3. Fill detergent in the spray can.
4. Screw lid on the spray can.

6.3.2 Assembling the spray device

Fig. 7 Assembling the spray device

Risk of injury from rotating parts!

Before carrying out any assembly work, switch off the appliance and pull out the mains plug.

1. Fix the 4 holders (1) at the handle bar (2) with a distance of 85 mm. Use an Allan key. Make sure that the holders (1) are parallel to the handle (3).
2. Put the sprayer with the bracket into the holders.
3. Screw the spray nozzle (5) on to the holder (6).
4. While working, pump with the level (8) to apply spray medium.

NOTE!

Please observe the correct position of the spray nozzle. The spray nozzle must be directed forward and diagonally to the bottom.

WARNING! Risk of injury by slipping!

Move carefully on floors where detergents have been used.

6.3.3 Assembling the suction ring / vac unit (Optional)

Fig. 8 Assembling the suction ring

Assembling the suction ring

Risk of injury from rotating parts!

Before removing the cleaning tool unplug the device!

Wear protective gloves!

1. Put the guide bar into a vertical position. To do this, pull the positioning lever (5) and swivel the guide bar (4) to the front. Then release the positioning lever again.
2. Tilt the machine backwards until the switch housing (6) rests on the floor.
3. Put on the suction ring (1) on the machine body (3). The bristles point away from the machine. The hose closure clip (8) must point to the left in the direction of travel.
4. Close the hose closure clip (8).
5. Point the suction device (7) to between the suction ring (1) and the body (3).

Fig. 9 Mounting the vac unit

Mounting the vac unit

1. Push the mounting bracket (1) of the vac unit into the upper fixture (3) of the guide bar.
2. Press the upper part of the tank tightly against the guide bar until the snap connection (4) snaps in place.
3. Push the plug (6) into the socket (5) on the right side of the machine housing.
4. Plug the suction hose (7) of the vac unit into the connection of the suction ring.

NOTE!

Once the single brush machine has been switched on, the vac unit starts automatically after a delay of about one to two seconds.

NOTE!

For further information on the vac unit (e.g. changing the paper bag) please see the accompanying operating manual.

7 Operation

WARNING! Risk of injury!

The appliance may put people and objects at risk. Work on and with the appliance may only be carried out by properly qualified personnel in accordance with all the safety instructions given in the Chapter "Safety"!

Every operator must first read through the whole operating manual – especially all the instructions in the chapter on "Safety" – and have understood it before operating the appliance.

WARNING! Danger of electric shock!

Make sure that the electrical connection values are consistent with those on the type plate of the appliance. The single brush machine must only be used on appropriately fused electric circuits.

7.1 Tasks before starting cleaning

7.1.1 Checks before starting

ATTENTION!

The appliance must be in proper working order, otherwise the appliance or the floor surface to be cleaned may be damaged or ruined.

Therefore carry out the following checks before starting work:

1. Visual inspection of the appliance for damage or missing parts.
2. Check that all the operating controls are working properly.
3. Check the cleaning tool is working properly

7.1.2 Setting the guide bar / moving the appliance

Setting the handle position

1. Pull the positioning lever (1) and keep holding it.
2. Swivel the guide bar (3) to bring the handle (2) into a comfortable working position.
3. Release the positioning lever.

Moving the appliance from place to place

1. Put the guide bar (3) into a vertical position by swivelling it completely forward.
2. Tilt the appliance backwards using the handle (2).
3. Push the appliance slowly and carefully by the handle (2) to where you want to go.

ATTENTION!

The appliance should always be carried by two people if it needs to be lifted.

Fig. 10 Setting the guide bar

7.1.3 Setting the swivel joint

Fig. 11 Setting the swivel joint stiffness

The ease of movement of the guide bar pivot can be adjusted as required. To do this proceed as follows:

1. First release the lock nut on the end of the adjusting screw using a flat or ring spanner SW 13 (1).
2. Set the pivot to the desired stiffness using a size 5 Allen key (2):
 - Turn Allen key anticlockwise if the setting bar is too stiff.
 - Turn Allen key clockwise if the setting bar is too loose.
3. Retighten the lock nut firmly.

7.1.4 Setting the working pressure

Fig. 12 Setting the working pressure

The working pressure can be set using the adjustable knob (1):

- Turn clockwise (CW): to reduce the working pressure
- Turn counter-clockwise (CCW): to increase the working pressure

NOTE!

The effective pad pressure for polishing and/or spray cleaning depends on the working speed and the type and quality of the floor covering.

It is recommended to start off with the lowest pressure (turn the adjustable knob (1) clockwise to the right as far as it will go) and then increase the pressure as required.

7.2 Operation during cleaning work

7.2.1 Switching on and off

Fig. 13. Switching on and off

Switching on

1. Adjust the guide bar (see above).

WARNING! Risk of injury!

Never switch the machine on with the guide bar in the vertical position as very high forces are required hold it!

WARNING! Risk of injury!

When switching on the machine and working with it, always control it with both hands!

2. Press push button (2) at the rear of the switching housing with your thumb and hold it down. (The button stops the appliance being switched on again by mistake).
3. Pull the lefthand or righthand switch lever (1) with the fingers towards the handle (3).
4. The machine is now switched on. You can now release button (2) again.

Switching off

WARNING! Risk of injury!

Hold the machine firmly with both hands until it comes to a complete rest!

1. Release both levers (1).
2. Keep a firm hold on the handle bar of the appliance until the machine comes to a complete stop.
3. Move the guide bar into a vertical position.

NOTE!

The appliance has a thermal fuse which cuts off the motor if there is a danger of overload. The appliance can be switched on again after a cooling-off period of 5 to 10 minutes.

WARNING!

Because of the high rotational speed of the equipment, it is essential to move the machine quickly over the floor immediately after switching on. If the machine remains stationary there is a danger that the floor covering may overheat.

NOTE!

If 20" (Ø 508 mm) pads are used for edgeless working, the machine must be guided very carefully because of the extending pads, in order to avoid damaging the walls and furniture.

7.3 Using the high-speed single brush machine

7.3.1 Attachment of the pad

Fig. 16 Attachment of the pad

Risk of injury from rotating parts!

Before attaching or removing the cleaning tool, always unplug the device! Wear protective gloves!

Attaching the cleaning tool

1. Bring guide bar (1) into a vertical position. To do this, pull the positioning lever (2) and push the guide bar forward. Then release the positioning lever again.
2. Tilt the machine backwards so that the switch housing (3) is resting on the floor.
3. Completely remove the pad fixture (4) by unscrewing it counter-clockwise (CCW).
4. Press the pad (5) concentrically onto the pad holder disc (6).
5. Retighten the pad fixture (4).

Pad removal

Carry out the above procedure in the reverse order.

7.3.2 Starting work

1. Prepare the single brush machine as described in the chapter "Tasks before starting cleaning".
2. Adjust the handle
 - **Never use appliance with the guide bar in a vertical position.**
3. Switch on the appliance (see Chapter "Switching on and off").
 - **Always guide the machine with both hands.**
4. Slowly and carefully guide single brush machine forwards and backwards over the surface to be cleaned.

Pay attention to the following when working with the appliance:

 - Do not run over the mains power cable. Running over the power supply cable with the brush rotating could cause a fatal accident!
 - Always control the machine with both hands.
 - Move the appliance cautiously, take care to keep clear of people and objects in the vicinity.
 - When operating the appliance never put other people at risk.
 - When cleaning floors with the appliance, never go over thresholds, steps or carpets or objects which might get caught, such as cables. Max. floor gradient 2 %.
 - Never leave the appliance unattended. Keep unauthorized persons away from the appliance.

7.3.3 On finishing work

1. When cleaning is finished, switch off the appliance (see Chapter "Switching on and off")
 - **Hold the machine firmly with both hands until it has come to a complete stop!**
2. Bring the guide bar into the vertical position.
3. The cleaning tool must always be removed (see Chapter "Cleaning tool attach/remove")
4. Keep the machine in a dry, frost-free place until it is next required.

8 Maintenance

WARNING! Risk of injury!

The appliance may put people and objects at risk. Work on and with the appliance may only be carried out by properly qualified personnel in accordance with all the safety instructions given in Chapter "Safety"!

- Clean the machine with a moistened cloth (if necessary, a mild detergent may be used).
- Take care that the ventilation slots of the motor on the machine body are not clogged so that good cooling of the motor is assured.
- Take care that the bumpers on the machine body fit tightly and are in the right place.
- Check the cables, plug and socket regularly for damage (e.g. wear, scorch marks, etc.).

9 Troubleshooting

WARNING! Risk of injury!

The appliance may put people and objects at risk. Work on and with the appliance may only be carried out by properly qualified personnel in accordance with all the safety instructions given in Chapter "Safety"!

Before troubleshooting, switch off the appliance and pull out the mains plug, where necessary.

Fault	Possible cause	Remedy
Machine does not work	Mains plug not connected correctly	Check plug on correct connection.
	Mains plug not properly in the socket	Push the mains plug properly into the socket
	The thermal release caused the motor to switch off	Allow appliance to cool down for 5 to 10 minutes.
	Motor faulty	Contact the manufacturer.
Machine is not running smoothly	Cleaning tool is contaminated	Check cleaning tool on dirt. If necessary disconnect or wash with water.
	Cleaning tool is worn out unevenly	Fit a new cleaning tool.
	Cleaning tool is not centred in the catch	Check the correct positioning of the cleaning tool. If necessary, centre the cleaning tool on the drive disc.
Machine gyrates, out-of-balance	Cleaning tool is not assembled correctly.	Check the correct positioning of the cleaning tool. If necessary remove and refit the cleaning tool.

10 Accessories

The following accessories can be obtained from the manufacturer:

- Drive plates for pads
- Pad fixture
- Vacuum units with suction ring for vacuuming dry, non-poisonous dusts
- Cleaning and floor care products for different applications
- Spray device
- Pads
- Extension cable

Detailed information about our accessories can be found in our price list.

11 Declaration of Conformity

in terms of the EU Machine directive 2006/42/EG

The manufacturer
G. Staehle GmbH u. Co. KG
Mercedes Strasse 15
D-70372 Stuttgart

herewith declares that the product specified in the following complies with the provisions of the above directive – including the relevant modifications at the time of the declaration.

Product: **High-Speed Single Brush Machine**

Types: **HS 1601 1500 W 230V/50Hz**

HS 1601 1500 W 230V/50Hz

The following harmonised standards have been applied:

EN 60335-1	Household and similar electrical appliances – Safety - Part 1: General requirements
EN 60335-2-67	Safety of household and similar electrical appliances - Part 2-72: Particular requirements for floor treatment and cleaning machines for industrial and commercial use
EN 12100-1	Safety of machinery - Basic concepts, general principles for design - Part 1: Basic terminology, methodology
EN 12100-2	Safety of machinery – Basic concepts, general principles for design - Part 2: Technical principles
DIN EN ISO 13857	Safety of machinery – Safety distance to prevent danger zones being reached by the upper limbs
EN/IEC 61000-3-2	Electromagnetic compatibility
EN/IEC 61000-4-11	
EN 55014-2	
EN 55014-1	

The following EU directives have also been complied with:

2014/30/EU EMC Directive

Stuttgart, 19.06.2019

Dipl. Ing.(BA) Erich Stockmann, Head of Design and Development
